No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

Sequence 3894, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:

APPLICANT: Duclert, A.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

PILE REFERENCE: 59.US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 2000-02-24

PRIOR APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

SOFTWARE: Patent.pm

; Sequence 10311, Application US/09513999C
; Patent No. 6783961;
; GENERAL INFORMATION:
; APPLICANT: Dumas Milne Edwards, J.B.
; APPLICANT: Duclert, A.;
; APPLICANT: Glordano, J.Y.
; TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
; Patent No. 6783961
; PILE REFERENCE: 59, USZ. REG
; CURRENT APPLICATION NUMBER: US/09/513,999C
; CURRENT PILING DATE: 2000-02-24
; PRIOR PILING DATE: 1999-02-26
; NUMBER OF SEQ ID NOS: 36681
; SEQ ID NO 10371

Patent No. 6703491
GENERAL INFORMATION
GENERAL INFORMATION
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT APPLICATION NUMBER: US/09/270,767
SUMPRENT PATELNG DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62217
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Homburger et al.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT PILING DATE: 1999-02-12

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  103 ------ATAGAATGTCAAGCTAAACGGGGGCGTCGCTACT 135

Amino acid sequence of human ring finger protein ROC1. AAB19160 standard; protein; 108 AA

ROC1; ROC2; cullin; ring finger protein; APC11; APC complex; SCF pathway; cullin dependent ubiquitin ligase; CDK inhibitor Sic1 degradation;

31-MAR-2000; 2000WO-US008592.

(UYNC-) UNIV NORTH CAROLINA.

Novel nucleic acid encoding cullin regulating ring finger proteins, termed as ROC proteins similar to anaphase-promoting complex 11, for therapeutic and diagnostic use.

Claim 9; Fig 2A; 83pp; English

The present sequence represents a human ROC1 ring finger protein. The specification also describes human ROC2. ROC1 and ROC2 are similar to APC11, a subunit of the APC complex. The proteins stimulate cullin dependent ubiquitin ligase activity. ROC1 functions in vivo as an essential regulator of CDK inhibitor Sic1 degradation by the SCF (undefined) pathway. ROC proteins are useful for screening bioactive agents that interfere with the binding of ROC proteins with cullin proteins. Pharmaceutical formulations comprising ROC proteins are useful for diagnostic and therapeutic purposes, preferably for diagnosing and treating tumours

The polypeptide is a tumour suppressor. Rbx1 is useful for diagnosing a predisposition of a patient to certain carcinomas. It is also useful for treating Ring box protein associated carcinomas or augmenting metabolically deficient system in animals. Rbx1 is also useful for evaluating the effectiveness of a therapeutic treatment for Ring box associated carcinomas. Rbx1 can be used to screen for agents which augment or inhibit the activity of other cullin-containing ubiquitin ligase and of the VHL (von Hippel- Lindau) proteins to various sets of target proteins. Carcinomas which may be treated include renal carcinomas, cerebellar hemangioblastomas and hemangiomas, retinal angiomata and pheochromocytomas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

The sequences given in AAB47596-602 are proteins which may be used in the method of the invention for assaying ubiquitin ligase activity. The method comprises combining under conditions that favour ubiquitin ligase activity, tagl-ubiquitin 21 (ubiquitin ligase) and measuring the amount of tagl-ubiquitin bound to the B3. The method is useful for assaying ubiquitin ligase activity and ubiquitin enzyme activity which is useful for identifying ubiquiting modulator. The method comprises combining tagl-ubiquitin, the modulator, E1, E2 and tag2-E3 and measuring the amount of tagl-ubiquitin, bound to tag3-E2 and measuring the amount of tagl-ubiquitin bound to tag3-E2 and measuring the amount of tagl-ubiquitin ligase activity is measured chiquitin bound to tag3-E2. Ubiquitin ligase activity is measured analysis such as separating ligated from unligated material in an SDS-DAGE procedure. This allows multi-well array analysis and high throughput screening techniques for modulators of ubiquitination activity. The method also allows the analysis of many different combinations of E3 components and E2/E3 combinations without requiring prior identification of specific target substrates. Ubiquitin is labeled, directly or indirectly and this allows for easy and rapid detection and measurement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Assaying ubiquitin ligase activity for identifying modulators of ubiquitination, by combining ubiquitin, ubiquitin activating conjugating enzyme, ubiquitin ligase and measuring amount of ubiquitin bound to the
                                                                                                                                                                                            Assay, ubiquitin ligase, tagl-ubiquitin, El, E2;

Assay for ubiquitin ligase activity, useful for identifying modulators,
by measuring binding of labeled ubiquitin to ubiquitin ligase.
                                                                                                                                                                                                                Ubiquitin ligase, UL; tagl-ubiquitin; El; ubiquitin-activating enzyme;
E2; ubiquitin-conjugating enzyme/ubiquitin carrier protein; E3; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MAAAMDVDTPSGTNSGAGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ

that are enzymatic components of ubiquitin-mediated protectives are enzymatic components of ubiquitin-mediated protectives. Specifically, it refers to a method for identifying ubiquitin-activating, conjugating agents that work to modulate the attachment of a ubiquitin moiety to at least one other ubiquitin agent. The method comprises combining a first ubiquitin agent, candidate agent and ubiquitin moiety, and subsequently assaying for the attachment of a ubiquitin moiety, to the first agent. The present invention does not require a ubiquitin target protein and allows the analysis of many different combinations of ubiquitin agents, without requiring the identification of specific target proteins. Consequently, this method is easy, applicable for high-throughput sereening applications and so can rapidly detect the activity of ubiquitin agents. This polypeptide sequence is the RING finger protein ROC1, an E3 ubiquitin ligating agent
                                                                                                                                                                                                                                                                                                                                         Assaying agent that modulates attachment of ubiquitin moiety to ubiquiting agent, by combining first ubiquitin agent, candidate agent and ubiquitin moiety, and assaying agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MAAAMDVDTPSGTNSGAGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MAAAMDVDTPSGTNSGAGKRRFEVKKRNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a method of assaying for a candidate agent that modulates the attachment of a ubiquitin moiety to an Mdm2 protein. The method is useful for assaying for a candidate agent that modulates the attachment of a ubiquitin moiety to an Mdm2 or p53 protein. The present sequence represents the amino acid sequence of RING finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide polypeptides at least 80% identical to the TAT nucleic acids and polypeptide polypeptides expression vectors and host calls comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, cervical cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central cancer, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation and in gene therapy. The present sequence represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MAAAMDVDTPSGTNSGAGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ELECTION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
```

```
This invention relates to novel protein complexes of the tumour necrosis factor-alpha (TNF-alpha) signalling pathway. Specifically, it refers to methods for preparing these complexes comprising at least two component proteins, as well as screening methods to identify modulators of the proteins, as well as screening methods to identify modulators of the present invention describes a protein complex and kit that are useful for diagnosing, prognosing or treating chronic inflammatory diseases such as recording arthritis and inflammatory bowel disease, infectious diseases such as septic shock and bacterial infections; neurological diseases such as stroke-induced inflammation in neurons; neurological diseases such as stroke-induced inflammation in neurons; neurological diseases and cancer. Accordingly, these complexes can be used for the development of pharmaceutical compositions that exhibit antinflammatory, antiarthritic, antirheumatic, cytostatic and antibacterial activities and can be used for gene therapy purposes. In particular, the invention further provides is INNA-oligonucleotides useful for inhibiting protein expression for in vitro or cell culture assays. This polypeptide is a human protein that can be used in combination with other proteins provided in the photonic control of the inventor protein that the inventor in the complexes of the INF-alpha signalling pathway
                                                                                                                                                                                                                                                                                                                                                                                       New protein complex comprising at least one first and second protein of
the Tumor Necrosis Factor-alpha(TNF-alpha)-signaling pathway, useful for
diagnosing or treating inflammation, neurological diseases, infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MAAAMDVDTPSGTNSGAGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ

                                                                                                                                                                                                                                                                                                                                                   28-MAY-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -NUL-81
                                                                                                                                                                                                                                                                                                                                                                                           -NDD-70
    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                           74
                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL061840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                 5 MDVDTPSGTNSG----AGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ

CC The present sequence represents a yeast cullin-interacting RING-H2 finger protein (Ring box protein), designated Rbx1. The human Rbx1 polypeptide is a tumour suppressor. Human Rbx1 is useful for diagnosing a parient to certain carcinomas. It is also useful for treating Ring box protein associated carcinomas or augmenting metabolically deficient system in animals. Human Rbx1 is also useful for evaluating the effectiveness of a therapeutic treatment for Ring box associated carcinomas. Human Rbx1 can be used to screen for agents which augment or inhibit the activity of other cullin-containing ubiquitin conjugation of ubiquitin or ubiquitin. It we proteins to various sets of target proteins. Carcinomas which may be treated include renal carcinomas, cerebellar hemangioblastomas and hemangiomas, retinal

WPI; 2004-208711/20 N-PSDB; ADP22559 Novel gene encoding zinc finger protein, useful as probe in gene detecting instruments and in development of drug for treating zinc finger

The invention comprises the amino acid and coding sequences of sea-squirt (Ciona intestinalis) zinc finger proteins. The DNA and protein sequences of the invention are useful in a gene detecting instrument. The DNA and protein sequences of the invention are useful in the development of drugs for the treatment of zinc finger protein-associated diseases. The present amino acid sequence represents a sea-squirt zinc finger protein of the Claim 1; SEQ ID NO 134; 972pp; Japanese. protein associated diseases. invention.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- permanent accession numbers. The new UniProt record may not contain the previous temporary numbers from the most recent version of UniProt. These sequences have been assigned new Please note that the curators of the UniProt database have purged some temporary accession accession number.
- extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein If you encounter an accession number from an older search run against UniProt (results file Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

members of the public who may encounter UniProt temporary accession When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or numbers.

Nature 416:703-709(2002).

CEC(VHL) (CUL2-elonging BC-VHL) E3 ubiquitin ligase complexes, which mediate the ubiquitination and subsequent proceasomal degradation of target proteins involved in cell cycle progression, signal transduction and transcription. Through the RING-type zinc finger, seems to recruit the E2 ubiquitination enzyme, like CDC34, to the complex and brings it into close proximity to the substrate. Probably also stimulates CDC34 autoubiquitination. Promotes the neddylation of CUL1 and probably CUL2.

Promotes the neddylation of CUL1 and probably CUL2.

Promotes the neddylation of third step.

Promotes the neddylation of CUL1 and probably CUL2.

COMPLEXED TO CUL2 or CUL2 and PLESS.

COMPLEXED TO CUL2 and NEDS: consisting of CUL1, RBX1, SKP1 and FBXM9. Part of a SCF-like complexes with elongin BC complex (TCEB1 and TCEB2), CUL2 or CUL2 and MDY1. Part of multisubunit complexes with elongin BC complex (TCEB1 and TCEB2), CUL2 and MDY1. Part of multisubunit complexes with elongin BC complex (TCEB1 and TCEB2), elongin A/TCEB3 or SOCS1 or WSB1 and CUL3.

CULAA, CULAB, CUL3 and CUL7. Probably also with CUL2, CUL3, CUL3, and CUL4, Part of MULT. Part of MULT. Part of MULT. Part of MULT. CUL3. IDENTIFICATION IN E3 UBIQUITIN LIGASE COMPLEX WITH MUF1, AND IDENTIFICATION IN COMPLEXES WITH CUL5.

-!- PATHWAY: Ubiquitin conjugation; third step.
-!- PATHWAY: Ubiquitin conjugation; third step.
-!- SUBUNIT: Part of a SCF complex consisting of CUL1, RBX1, SKP1 and SKP2. Part of a SCF-like complex consisting of CUL7, RBX1, SKP1 and FBXW8. Part of CBC(VHL) complexes with elongin BC complex (TCEB1 and TCEB2), CUL2 or CUL5 and WHI. Part of multisubunit B3 ubiquitin ligase complexes with elongin C complex (TCEB1 and TCEB2), CUL5 and MEDS; elongin BC complex (TCEB1 and TCEB2), CUL5 and MUFI. Part of multisubunit complexes with elongin BC complex (TCEB1 and TCEB2), alongin ACTEB3 or SOCSI or WSB1 and CUL5.

INCEB1 and TCEB2), alongin A/TCB3 or SOCSI or WSB1 and CUL5.
INCEB1 and TCEB2), alongin A/TCB3 or SOCSI or WSB1 and CUL5.

INCEB1 CUL8, CUL5 and CUL7. Probably interacts with CDC34.
-!- SUBCELULAR LOCATION: Cycoplasmic and nuclear (By similarity).
-!- TISSUE SPECIFICITY: Widely expressed.
-!- DOMAIN: The RING-type zinc finger domain is essential for ubiquitin ligase activity. It coordinates an additional third zinc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IDENTIFICATION IN E3 UBIQUITIN LIGASE COMPLEX WITH MUF1, AND IDENTIFICATION IN COMPLEXES WITH CULE.

--- SUBCELLULAR LOCATION: Cytoplasmic and nuclear (By similarity).
--- TISSUE SPECIFICITY: Expressed in heart and kidney.
--- INDUCTION: During hyperosmotic stress and thermal stress.
--- DOMAIN: The RING-type 2 inc finger domain is essential for ubiquitin ligase activity. It coordinates an additional third zinc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the
                                                                                                                                                                                                                                                                 1 MAAAMDVDTPSGTNSGAGKKRFEVKKWNAVALWAWDIVVDNCAICRNHIMDLCIECQANQ

Pan F., Zarate J., Bradley T.M.;
"A homolog of the E3 ubiquitin ligase Rbx1 is induced during hyperosmotic stress of salmon."
Am. J. Physiol. 282:R1643-R1653(2002).
-1- FUNCTION: Component of the SCF (SKP1-CUL1-F-box protein) E3 ubiquitin ligase complex, which mediates the ubiquitination and subsequent proteasomal degradation of target proteins. Through the RING-type zinc finger, seems to recruit the E2 ubiquitination nerzyme, like CDC34, to the complex and brings it into close proximity to the substrate (By similarity).
-1- PATHWAY: Ubiquitin conjugation; third step.
-1- SUBUNIT: Part of SCF complexes, which consist of SKP1, CUL1, RBX1

                                                                                                                                                                                                                                 Gaps
